TIMER DIMMING

NOTE:

1. The dimming time can be programmed by the NFC controller.
2. The time of t_1 and t_2 can be set by the NFC programmer. (0.5h step)
3. The value of I_1 and I_2 can be set by the NFC programmer.
4. Current change from I_1 to I_2 need a few minutes.

0-10V ANALOG & PWM DIMMING

Io/Ir vs Vdim

Io/Ir vs Vdim

GND	Grey
Dimming wire 0-10V&PWM	Purple
10V AUX	Yellow
Input Dimming Voltage	0-10V
DIM+ Source Current	0-1mA
10V AUX Source Current	20mA
PWM Frequency Range	0.5 ~ 3 kHz
PWM high level	10V

NOTE:

1. I_o is actual output current and I_r is rated current without dimming control.
2. For the driver to operate properly, the load voltage must be in the working voltage range.
3. We have DIM-TO-OFF option can be programmed by the programmer.
4. Maximum input voltage at dimming wire is 12V.
5. AUX wire is only for source, can't connect to other voltage source.

NFC CONTROLLER

NOTE:

1. The NFC controller can program the output current, voltage and timer delays.
2. The NFC programming is a non-contact process, therefore much safer compared to traditional programming methods.
3. Power devices can be programmed without AC power applied to the driver.
